## Thanks, Mr. McConaughey

"My father and I have bought seed from you for about 40 years and from now on my son John will buy. In passing I want to say in all these years gone by we have found you to be honest, fair and trustworthy. Thanks and good wishes to you who have so well served two generations of our family and now going into the third."—D. Chas. McConaughey, Jer-Alfa-Dale Farm, Cameron, W. Va.

To each of you who receive this price list we want to be fully as generous in our thanks for seed orders, inquiries and interest this season.

### Seed Corn

We still have fair supplies of most hybrids and with the exception of several of the earlier ones the seed is nice quality and attractive. All corn is uniformly graded, above 90 in germination and treated. Regular prices apply to less than bushel orders. A second choice should be indicated or we will write if out of the corn selected.

### Soybeans

Earlyanas are taller and about four days earlier in maturity than Richlands. They are suggested for light colored soils and for northern areas where wheat is to follow. Richlands are the stiffest strawed variety, high producers on dark colored and productive soils but on light colored or thin soils are criticized for not growing tall enough and for setting pods too close to the ground.

Lincolns are the leading full season variety, are high yielding and can be followed by wheat in southern areas. While often used for hay the black varieties are considered best because they are finer stemmed and leafier.

Inoculated beans add more nitrogen to the soil than they remove, usually start quicker, carry a better color throughout the season and yield more than those not inoculated. Inoculation is furnished without additional charge on all soybean orders.

### Emergency Hay and Pasture

Sudan grass, soybeans and millet are most widely used for emergency hay and pasture. Sudans are seeded at about 20 pounds, millet at 30 to 40 pounds and soybeans at 2½ bushels per acre. Sudan and millet should be seeded rather shallow and fertilized for satisfactory stands and vigorous growth.

### Weed Control

"Modern Weed Control," the March issue of Crop News and Views, will be sent to those who may have misplaced their copies or to any who did not receive this bulletin. All the weed killing materials offered have full directions for proper use on each package.

While the next price list of SCOTTS Farm Seeds will not be mailed until about August 1st we will be glad to answer inquiries and give quotations at any time. Seeds that will be needed this summer will be on hand ready for shipment.

# TREATED HYBRID SEED CORN

SCOTTS Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. It is treated for protection against disease. The round kernels are graded uniformly and will yield just as well as the flats but special plates are usually required for accurate planting. These plates are available for most standard planters.
